EDUCATION

Texas A&M University

Master of Computer Science; GPA: 3.7/4.0

Aug. 2025 – May 2027

College Station, TX

- Coursework: Machine Learning, Data Mining and Analysis, Parallel Computing, Advanced Networking

Madras Institute of Technology, Anna University

Bachelor of Engineering in Electronics and Communication; GPA: 3.5/4.0

Oct. 2020 – May 2024

Chennai, India

- Coursework: Operating System, Cloud Computing, Software Engineering, Machine Learning using Python

EXPERIENCE

Software Engineer

July 2024 – July 2025

Accolite Digital

Bangalore, India

- Architected backend integrations across **12 Java microservices**, enabling **high-volume transactional workflows** through modular service design, **distributed API communication**, and cleaner separation of business logic across platform components
- Improved system throughput by **25%** by designing **asynchronous message queue workflows** that decoupled microservice operations, reduced blocking dependencies, and improved concurrent processing across high-volume transactional workload
- Built an internal **feature flag and configuration service**, cutting hotfix turnaround time by **40%** through dynamic rollouts, runtime configuration changes, controlled releases, and redeployment-free production updates

Software Engineering Intern

Jan. 2024 – June 2024

Accolite Digital

Bangalore, India

- Developed and shipped **6 Spring Boot REST API endpoints** for customer facing financial platform, implementing **authentication, pagination, validation, error handling**, and maintainable service-layer business logic
- Improved release confidence by writing **JUnit unit and integration tests** covering **85% of new service logic**, catching **3 critical bugs** before production deployment and release approval
- Containerized **4 backend services** using **Docker** and integrated them into **Jenkins CI/CD** thus improving deployment consistency

PROJECTS

Phishing URL Detection | Python, FastAPI, scikit-learn, PostgreSQL

Dec. 2025 – Jan. 2026

- Built machine learning model detecting phishing URLs using **lexical and infrastructure-based features** trained on **64k labeled URLs** from public phishing datasets (found on Kaggle)
- Achieved **94% classification accuracy** and **0.92 F1-score** using **gradient boosting and logistic regression models** after feature engineering and hyperparameter tuning
- Deployed **FastAPI-based prediction service** supporting real-time phishing detection with **<50 ms inference latency** and also added a browser and a CLI extension for testing using an overlay

Distributed Order Processing Platform | Java, Spring Boot, PostgreSQL, Redis, Kafka, Docker, AWS

Jan. 2025 – Feb. 2025

- Engineered a distributed order processing platform across **6 Spring Boot services**, handling **18,000 test orders** with **PostgreSQL persistence, Redis caching, Kafka events**, and Dockerized service orchestration
- Built **event-driven order workflows** using **Kafka** to decouple inventory reservation, payment simulation, and notification delivery, reducing synchronous service dependencies across **4 backend workflows**
- Strengthened **fault tolerance** by implementing **retry logic, idempotency checks, structured error handling**, and recovery workflows, preventing duplicate processing across **1,200 simulated failed payment requests**

Distributed File Storage and Metadata Service | Java, Spring Boot, PostgreSQL, Redis, Docker, AWS S3

Aug. 2025 – Nov. 2025

- Built a distributed file storage backend supporting **5,000 uploaded files**, using **Spring Boot, PostgreSQL, Redis, and AWS S3** for secure upload, download, sharing, and metadata workflows
- Designed **metadata, versioning, and access-control APIs** across **9 REST endpoints**, enabling folder management, file permissions, expiring download links, and secure document retrieval workflows
- Improved file metadata lookup latency by **41%** by implementing **Redis metadata caching, pre-signed S3 URLs**, and audit logging for file access, sharing, and deletion events

TECHNICAL SKILLS

- Languages/Frameworks** Java, C++, Python, Spring Boot, Fast API, Node.js, React
- Data & AI** SQL, MongoDB, Apache Spark, Apache Kafka, PyTorch, LangChain, LlamaIndex
- Web & Distributed Systems** Microservices, API Design, Distributed Systems, Express, Django, React Native
- DevOps & Cloud Tools** Git, Docker, Amazon Web Services (AWS), Postman, GraphQL
- Core Concepts** Data Structures, Algorithms, Object-Oriented Programming, System Design
