EDUCATION

Texas A&M University

Aug. 2025 – May 2027

Master of Computer Science; GPA: 3.4/4.0

College Station, TX

- Coursework: Machine Learning, Data Mining and Analysis, Parallel Computing, Advanced Networking

Madras Institute of Technology, Anna University

Oct. 2020 – May 2024

Bachelor of Engineering in Electronics and Communication; GPA: 3.5/4.0

Chennai, India

- Coursework: Operating System, Cloud Computing, Software Engineering, Machine Learning using Python

EXPERIENCE

Software Developer

July 2024 – July 2025

Accolite Digital

Bangalore, India

- Architected backend services integrating 12 Java microservices to support high-volume transactional platform workflows
- Designed asynchronous message queues for the microservices, which improved the system's throughput by 25%
- Built an internal feature flag and configuration service enabling dynamic rollouts without redeployment and reducing release risk and cutting hotfix turnaround time by 40%

Software Engineer Intern

Jan. 2024 – June 2024

Accolite Digital

Bangalore, India

- Developed and shipped 6 REST API endpoints in Spring Boot for a customer-facing financial platform, handling authentication, pagination, and error handling
- Wrote unit and integration tests using JUnit covering 85% of new service logic, catching 3 critical bugs before production deployment
- Containerized 4 backend services using Docker and integrated them into a Jenkins CI/CD pipeline

PROJECTS

Phishing URL Detection | Python, FastAPI, scikit-learn, PostgreSQL

Dec. 2025 – Jan. 2026

- Built machine learning model detecting phishing URLs using lexical and infrastructure-based features trained on 64k labeled URLs from public phishing datasets (found on Kaggle)
- Achieved 94% classification accuracy and 0.92 F1-score using gradient boosting and logistic regression models after feature engineering and hyperparameter tuning
- Deployed FastAPI-based prediction service supporting real-time phishing detection with <50 ms inference latency

CryptoWatch: Real-Time Cryptocurrency Alert System | Python, AWS Lambda, DynamoDB

Jan. 2025 – Feb. 2025

- Built serverless monitoring system tracking around 100 cryptocurrency prices using public APIs
- Implemented Lambda-based automation detecting price threshold triggers in real time
- Delivered instant notifications through SNS alerts for automated market monitoring

Distributed Job Queue System | Python, Redis, Docker

Aug. 2025 – Nov. 2025

- Built distributed background task processing system supporting asynchronous job execution across multiple worker nodes, which was able to handle more than 10K queued tasks during testing
- Implemented Redis-backed task queue and worker pool, enabling concurrent processing across 8 worker processes and improving task throughput by 3 times compared to sequential execution
- Designed retry, backoff, and failure recovery logic, reducing job failure rates during simulated worker crashes and improving system reliability under load tests

TECHNICAL SKILL

- Programming Languages** Python, SQL, C++, Java
- Frameworks** Flask, Spring Boot, React
- Databases** PostgreSQL, MySQL, Redis, Oracle
- Technologies & Tools** AWS (Lambda, S3), Docker, Git, Linux, REST APIs, TensorFlow, Scikit-learn, Figma
- Coursework** Object-Oriented Analysis, Data Structures and Algorithms, Machine Learning
